This authoritative volume delves into the legal and policy foundations of renewable energy, offering a multifaceted analysis of the regulatory landscape. From international agreements to national policies and market mechanisms, the book examines the interplay between law, economics, and environmental considerations.

Chapter Overview

Chapter 1: The Global Context: A Survey of International Agreements and Institutions

This chapter explores the international legal framework for renewable energy, examining the key agreements and organizations shaping the global agenda. It analyzes the role of the United Nations, the International Renewable Energy Agency (IRENA), and other multilateral bodies.

Chapter 2: National Policy Frameworks and Regulatory Regimes

This chapter provides an in-depth comparative analysis of national renewable energy policies. It examines the different approaches to setting targets, providing incentives, and regulating renewable energy development in diverse jurisdictions.

Chapter 3: Market Mechanisms for Renewable Energy

This chapter focuses on the economic and regulatory mechanisms used to promote renewable energy development. It explores feed-in tariffs, renewable portfolio standards, and other market-based instruments designed to incentivize investment and ensure the competitiveness of renewable technologies.

Chapter 4: Environmental Impact Assessment and Mitigation

This chapter examines the environmental implications of renewable energy development. It discusses the legal frameworks for environmental impact assessment, permitting, and mitigation measures, ensuring that renewable energy projects are developed in a sustainable manner.

Chapter 5: Land Use Planning and Siting Issues

This chapter addresses the challenges and opportunities of land use planning for renewable energy projects. It analyzes the legal and policy frameworks governing the siting of solar, wind, and other renewable energy facilities, ensuring compatibility with land use plans and the protection of natural resources.

Chapter 6: Grid Integration and Transmission Issues

This chapter examines the technical and regulatory challenges associated with integrating renewable energy into the electricity grid. It analyzes grid infrastructure development, transmission planning, and interconnection standards, ensuring the reliable and efficient transmission of renewable energy.

Chapter 7: Public Participation and Stakeholder Engagement

This chapter highlights the importance of public participation and stakeholder engagement in renewable energy policymaking. It discusses the legal frameworks and best practices for involving communities, environmental groups, and industry stakeholders in the development of renewable energy projects.

Target Audience

Renewable Resource Policy: The Legal Institutional Foundations is an indispensable resource for:

- Policymakers and regulators seeking to design and implement effective renewable energy policies
- Legal professionals specializing in energy law and environmental law

- Industry leaders and investors interested in navigating the legal and regulatory landscape of renewable energy development
- Researchers and academics studying the legal and institutional foundations of renewable energy

Renewable Resource Policy: The Legal Institutional Foundations is a timely and authoritative guide to the rapidly evolving field of renewable energy law and policy. Through its comprehensive analysis of international agreements, national regulatory frameworks, and market mechanisms, this book equips readers with the essential knowledge and insights to harness the full potential of renewable energy for a sustainable future.
